Telephone 0264 51114 Telex 47137

These are the basic effect wheels in every light show. Used either singly or in sets from more than one projector, or just with the Auto Changer on one machine, a room or area of a room can be painted with light effects and colour. The Cassettes come in six types:

**LIQUID —**

Almost certainly the best known and most popular type of effect, these cassettes are discs of coloured liquids which move under projection, creating ever-varying coloured shapes.

**PATTERN —**

A large selection of moire and pattern cassettes are available. The atmosphere

created can vary between frenzy and relaxation.

**PICTURE LIQUID CASSETTES —**

Carefully selected images which come to life with the different coloured liquids flowing within.

**LIQUID GRAPHIC CASSETTES —**

A pattern cassette with the design creating illusionary effects while coloured liquids

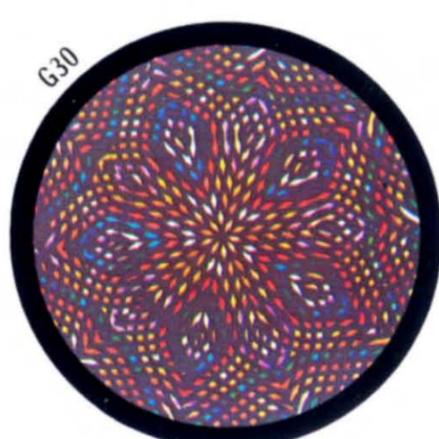

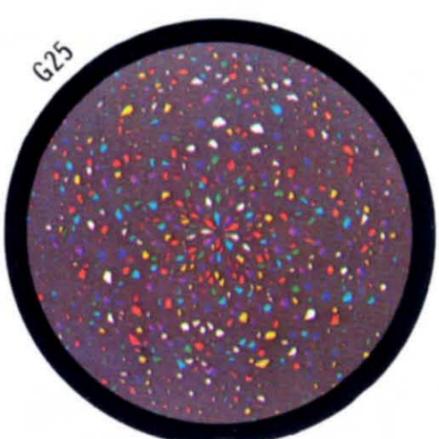

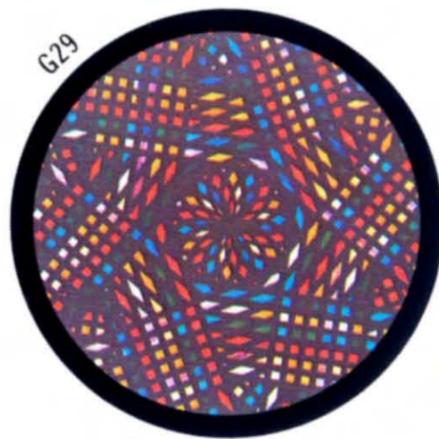

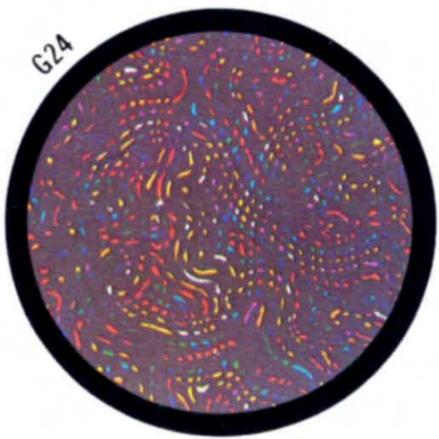

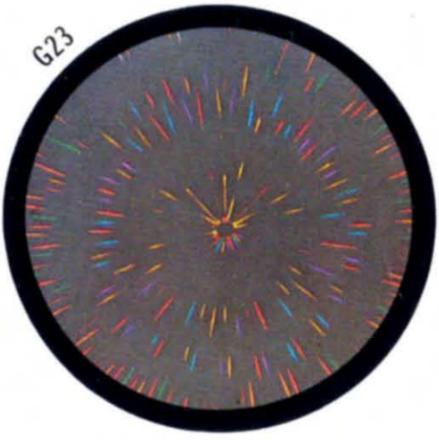

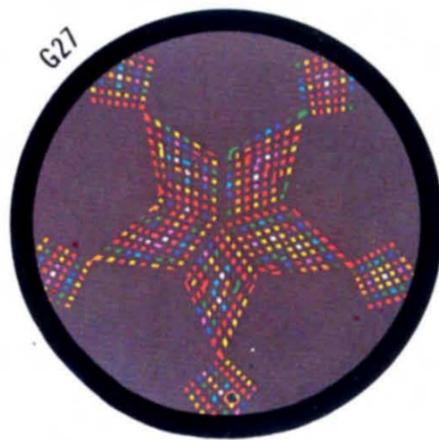

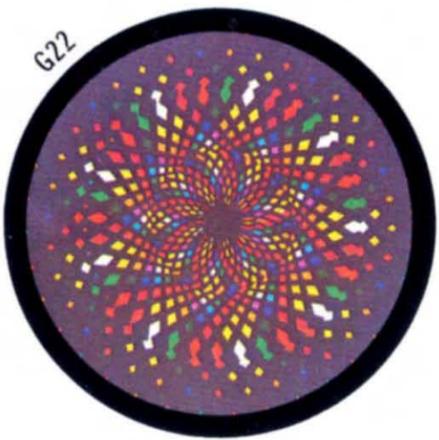

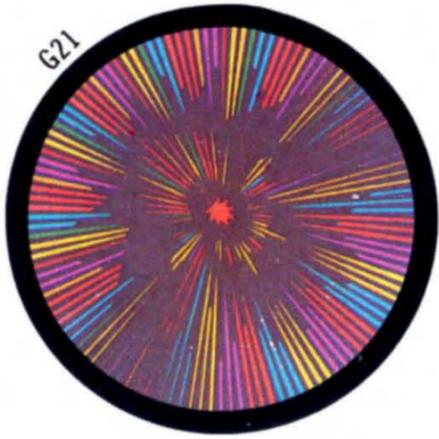

flow over the designs.

**KALEIDOSCOPE —**

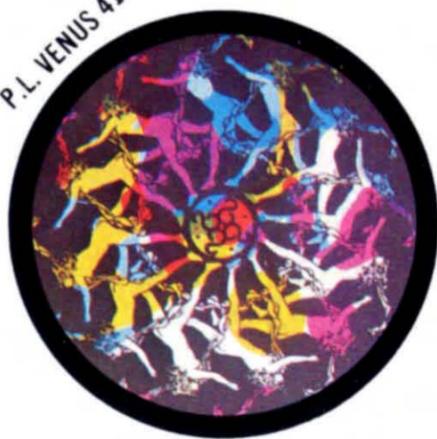

A specially designed cassette for use with the K.Lens, which in projection is reminiscent of the childhood toy.

**ZOOMERS —**

One colour effects which zoom in and out of the projection area.

# 6" Wheels

## 6" WHEELS —

Fit any Pluto projector to widen the programme scope.

## LIQUID —

The popular effect of multi-coloured fluids which create constantly changing patterns:

## COLOUR CHANGER —

A five colour wheel which is used without the projector lens as a colour change source.

## PICTURE WHEELS —

Are discs designed for use with all Pluto projectors and other compatible kinetic projectors. In use, a segment of the picture band is projected to appear as a moving

frame or scene. The high light transmission properties mean that these wheels can be used to good effect with the colour flash spinner and special effect lenses. This popular low priced range of products is constantly being enlarged.

**PICTURE LIQUID WHEELS —**

Refreshingly different, the coloured liquids flow within special designs in a combination of ever-changing colour and intricate detail.

**T.R. WHEELS —**

Produced in full colour, from specially prepared artwork, these wheels are packed full of lavish detail, the kind that can only

be achieved by continuous tone techniques.

**S.P. WHEELS —**

Are static pattern wheels which combine simple graphics with high light transmission and are designed for use with special effects lenses and prismatic attachments.
